

NEW!

Acrylic encasement is the modern method of canvas and photo display requiring no glue or stretching yet the image can be changed at a moment's notice. The InkjetPro Acrylic panels can be hung from picture hooks or screwed to plaster or solid brick walls.

New InkjetPro Acrylic Panels and Acrylic Windows

Present your canvas prints with European style by encasing them in InkjetPro Acrylic Panels or InkjetPro Acrylic Windows.

ACRYLIC PANELS

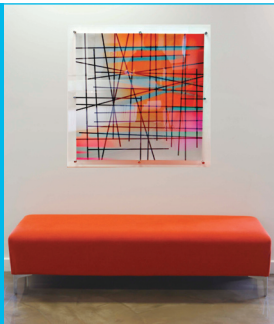

InkjetPro Acrylic Panels give your media an added punch with a deep, lustrous shine.

The InkjetPro Acrylic panels give even matt media - such as canvas - a deep lustrous shine due to the generous 4.5mm front acrylic sheet thickness. The rear panels are available in Clear, Frosted, White, Black or optional custom colours forming a deeply saturated border with flame surface edges.

Unlike earlier acrylic techniques where only super glossy images could be stuck to the rear of a single sheet of acrylic, the new sandwich techniques protect the print from damage at the rear, allowing matt media and coloured acrylic backings to form frame borders.

ACRYLIC WINDOWS

Create maximum impact with InkjetPro Acrylic Windows in sizes as large as 8' x 6'.

The InkjetPro Acrylic windows are much larger and thicker displays available to a full 8 foot (2.44m) by 6 foot (1.8m) to cater for the new 60 inch inkjet printers. The overall acrylic thickness is increased to 10.5mm overall with a 6.0mm front panel. InkjetPro Acrylic Windows are available in various backings with varying numbers of standoffs to support the products increased size and weight. The InkjetPro Acrylic Windows can be employed singularly or screwed to a wall or in multiples for very large displays. The acrylic used is marine grade UV stabilized and flame sided. The recommended stand-offs are marine grade stainless steel.

Available in clear, frosted or coloured backing, this is a gallery grade mounting system.

MOUNTINGS: Stand-offs are available in Aluminium (Silver Grey), Black and Marine Stainless Steel

The heart of the InkjetPro acrylic display is our unique standoffs that squeeze the acrylic panels together and do not come undone accidentally. Each acrylic panel or window comes with one or more blister packed sets of stand-offs complete with Allen key, silicone washers, wall plugs and screws. The blister packs are available as separately-ordered part numbers, if required. They stand 2.5cm from the wall.

Left: Blister packed stand-offs with complete with Allen key and silicone washers

When mounting media such as canvas, you need only position the media between the bolts which are 30mm (Panels) or 50mm (Windows) from the acrylic edges. The tension created by the fine threads of the standoffs in combination with the silicone washers means that the product will not come loose over time. The mounting can be opened at any time using the Allen key and the image replaced.

Acrylic panels can be mounted to a plaster or solid wall permanently with the wall plugs provided or hung from picture hooks using 25kg breaking strain clear fishing line (not included in blister pack).

The InkjetPro Acrylic Windows are heavier than the InkjetPro Acrylic Panels and can only be permanently mounted as they are gallery or signage display items.

Specifications:

Front Panel: Thickness: 4.5mm,
Material: Clear Acrylic, UV Stabilized

Rear Panel: Thickness: 3.0mm,
Material: Acrylic in range of finishes,
UV Stabilized

Bolt Holes: 30mm from the side
of the panel

Edges: Sides are flame-surfaced to
avoid sharp edges

* Minimum quantities apply on
custom orders
