

The logo for Revivawall, featuring the word "revivawall" in a blue, lowercase, sans-serif font. The "a" is stylized with a green leaf-like shape behind it.

INKJETPRO REVIVAWALL
SELF ADHESIVE FABRIC IS
SET TO REVOLUTIONIZE THE
AQUEOUS WIDE FORMAT
PRINTING INDUSTRY.

Unlike self adhesive signage vinyls that easily scratch or have poor color, Revivawall uses fine woven pure polyester fibre and a high quality photographic inkjet coating to make durable bright colors using unmodified wide format machines.

Printable on almost any 36 inch (914mm) or wider pigment inkjet printer from Epson, Canon or HP this new material features a low ink usage receptor combined with a special removable adhesive that won't strip the paint or leave a residue on most painted surfaces.

Revivawall. The wallpaper revolution!

Just print, peel apart and stick directly to the wall. No Stretching!

The logo for Reviva, featuring the word "REVIVA" in a bold, white, distressed font on a dark blue background. To the right of "REVIVA" is the tagline "the wallpaper revolution!" in a smaller, white, italicized font. The background of the logo is a colorful, abstract design with vertical stripes of blue, yellow, and red.

BE PART OF THE REVIVAWALL REVOLUTION.

Used in any form Revivawall, is the ultimate display material as its so easy to print and send to the customer in rolls for them to assemble. When applied to a clean acrylic painted wall or smooth laminate its takes just a few minutes to peel it apart and smooth down the image. When you are finished simply peel it off the wall and use it again!

Be part of our revolution – if you currently print on canvas or have a pigment wide format machine then increase your revenue without the need for any extra hardware by using Revivawall on almost any suitable flat surface.

ARCHIVAL QUALITY EVERY WHERE YOU USE IT.

Revivawall can be used for human silhouette figures in the kids playroom, wallpaper for the living room, temporary signage for the office, backlights or the display of large art murals in public spaces.

Where ever you choose to use Revivawall, you can be assured that the printed image is archival when printed with pigment inks and is water resistant with those inks.

HOW DO I APPLY REVIVAWALL POSTER?

Like all painting or wallpapering the preparation of the surface is critical. Revivawall is made to be easily removable on normal clean and dry non porous painted surfaces. If you have a freshly painted plaster wall then its usually no more than a peel and stick down, pushing out any air bubbles as you go for a temporary sign, silhouette or poster.

And remember Revivawall is removable – not just from the wall but from itself! Should you inadvertently let the uncovered adhesive stick to itself during application all is not lost – just gently peel apart.

Messy wallpaper adhesives are gone forever and the image can be removed without lifting the paint if it is in good condition.

FEATURES:

Wallpaper Paste Free

Water Resistant

Scratch Resistant
(with correct ink profiles)

Removable – even from itself

Light Fast (with pigment inks)

Low Ink Usage

Bright Colors

Flexible

Matched edge adhesives
and over coatings

External use coat with
Aquathane-UV

Detailed Instructions

Custom low ink color profiles.

PLEASE CONTACT GMS IF YOU NEED ACCESS TO A QUALIFIED DESIGNER OR FITTER OF DIGITAL WALLPAPER OR ACCESS TO LIMITED EDITION DESIGNS.

WHAT ABOUT EXTRA PROTECTION OR IF THE REVIVAWALL WON'T STICK?

The woven polyester nature of Revivawall makes pigment inks stronger to the touch so extra protection isn't normally needed. But just like our InkjetPro Canvas products, coating Revivawall makes the color much deeper and the surface even stronger.

InkjetPro GicléeShield-HF performs the dual roll of coating and edge adhesive for Revivawall. Should the underlying surface or edges provide poor adhesion so the edges lift or curl - either spraying or rolling a thin coat of Inkjetpro GicléeShield-HF should eliminate the problem.

For external usage Aquathane-UV should be sprayed and the life expectancy depends on the manufacturers ink, coating depth and amount of sun.

Please refer to our Technical Bulletin – Step by Step guide to Revivawall Application for more information.

BUT WHAT ABOUT WALLPAPER?

Wallpapering implies a higher quality permanent finish. Many acrylic painted walls, even those only a few years old have dirt or grease, cracks or other imperfections. Simply place a small piece of Revivawall on your wall and smooth it down, gently remove it after a few days and see if the image of the paper on the wall is far from clean.

In most cases a light sanding with 220 grit sandpaper is all that you need to remove the dust and fingermarks after filling any cracks. Heavily greased wall may require Sugar Soap but please avoid using these degreasing cleaners if they are not required as they must be thornily removed with clean water before application.

Wallpapering also requires a near seamless join and that means borderless printing. Please Refer to our Technical Bulletin – Step by Step guide to Revivawall Application. For more information on both butt or overlap joining using many popular wide format devices.
